

rminal block suitable for connecting any type of conductor r thermocouple circuits. In fact it is possible, thanks the excellent electrical contact that results from it, to amp thermocouples of any type without interposing any

esides the management of a single article, this solution ermits the reduction of the contact points in the overall circuit. he range of diameters of the conductors connectable, to make the connection in guestion fully effective and permanent, must between 0.8 and 1.3 mm.

The thermocouple circuits, also of a different diameter, stripped of the insulating sleeve for a length of 20 mm, must be placed one on top of another in the terminal block so as to enable the direct passage of thermoelectric EAH. Without going through a metal body, as happens in normal circuits. With the double clamping, ensured by two screws and by the interposition of the pressure plate, the possibility of EMFs determined by the non-uniformly of the contacts is reduced
