

rminal block suitable for connecting any type of conductor thermocouple circuits. In fact it is possible, thanks the excellent electrical contact that results from it, to amp thermocouples of any type without interposing any impensation material.

Besides the management of a single article, this solution permits the reduction of the contact points in the overall circuit. The range of diameters of the conductors connectable, to make the connection in question fully effective and permanent, must

The thermocouple circuits, also of a different diameter, stripped of the installating steeve for a length of 20 mm, must be placed one on top of another in the terminal block so as to enable the direct passage of thermoelectric EM. Without going through a metal body, as happens in normal circuits. With the double clamping, ensured by the screws and by the interposition of the pressure plate, the possibility of EMFs between the direct contacts is reduced between the direct contacts is reduced.
