APPROVAZIONI E MARCATURE	

La morsettiere CF12/1+1 è un sistema a innestimento a innestimento in cui la morsettiere sigilla la morsettiere collegata alla morsettiere del gruppo dove occorre ridurre con la piastrina terminale CF/PT (Accessori Extra). Il alloggiamento per il cavo è protetto da un coperchio a innestimento.

• In un alloggiamento vengono inserite due fori (4/5 mm) e un foro (6/8 mm) da V4.
Per assicurare il massimo isolamento verso massa ed un corretto montaggio delle morsettiere, è necessario inserire lo speciale bloccante CF/BI entro i fori sul corpo della morsettiere. Non sono richieste dalle morsettiere la morsettiere o la piastrina terminale in questi punti (almeno a gli appropriatamente sagomata).

La piastrina terminale di cui sopra porta in rilievo la numerazione dell'ETP per una rapida identificazione del polo.
La linea di connessione, completamente protetta verso l'esterno ed opportunamente dimensionata tra loro, viene realizzata in lega rame-cinco, ad alta percentuale di rame, con protezione galvanica anticorrosione ed adempimento in nichel, a richiesta, in argento.
